Are you looking
for a **natural** boost
to your lawn and
plants?

Add **life** to your lawn and garden with
a blend of beneficial natural soil bacteria

ACF-SR is great for lawn restoration and health. Issues such as dog spots, drought and yellowing can be remedied with just a single application. For best results, we recommend treating your lawn and garden a minimum of three times throughout the growing season: early spring, mid-summer and early fall.

ACF-SR helps to restore soil health, boost nutrient uptake, enhance root growth, increase drought tolerance, and improve overall plant growth.

A side-by-side comparison of a lawn. The left side, labeled 'Before', shows a lawn with significant brown, dead patches. The right side, labeled 'After', shows the same lawn area now covered in a thick, vibrant green lawn. In the background, a grey concrete block wall with decorative pillars and a brick fence are visible.

Before

After

1 Gallon - treats up to **2,000** sq. ft.

2.5 Gallon - treats up to **5,000** sq. ft.

Application Instructions

-  Use a clean sprayer that has not been used for chemical application
-  Dilute ACF-SR with water for ease of application
-  Dilute to an appropriate amount to allow for good, even coverage
-  Spray directly on your lawn and garden
-  Once applied, water your lawn and garden shortly afterward
